

Fig. 1

Traditional Class A System (no parallel commands)

User	Commands
1) Select "Extrapolation" command.	➤ Activate "Extrapolation" command.
2) Select patch 1.	➤ Mark patch 1 for extrapolation command.
3) Extrapolate patch 1 (dynamic interactive) by moving the extrapolation handle to the left, until the result satisfies.	For each dynamic step on modification of patch 1 do: ➤ Extrapolate
4) Select Matching command.	➤ Activate Matching command.
5) Select patch 2 as modified patch with neighbor edge to patch 1.	➤ Mark patch 2 for Matching as modification patch.
6) Select patch 1 as reference patch with neighbor edge to patch 2.	➤ Mark patch 1 for Matching as reference patch.
7) Adjust matching parameter (deactivate partly, inverse direction)	
8) Activate Matching.	➤ Match
9) Select Control Point command	➤ Activate "Control Point" command.
10) Select patch 2.	➤ Mark patch 2 for "Control Point" command.
11) Move third control point row of patch 2 (dynamic interactive) using one of the line segments of the control point mesh handle, until the following matching will satisfy (this is a guess).	For each dynamic step on modification of patch 2 do: ➤ Adjust control points.
12) Select Matching again.	➤ Activate Matching command.
13) Select patch 2 as modified patch with neighbor edge to patch 1.	➤ Mark patch 2 for Matching as modification patch.
14) Select patch 1 as reference patch with neighbor edge to patch 2.	➤ Mark patch 1 for Matching as reference patch.
15) Activate Matching.	➤ Match
Repeat step 9 and 15 until result satisfies.	

Fig. 2

Class A System with parallel commands

User	Main Command, Slot
1) Select "Control Point" command.	<ul style="list-style-type: none"> ➤ Include "Control Point" command into the active command table. ➤ Activate "Control Point" command.
2) Select patch 1.	<ul style="list-style-type: none"> ➤ Include patch 1 into geometry table (slot) and mark it for active command "Control Point". ➤ Send "Update 3D Handles" notification to "Control Point" command.
3) Select patch 2.	<ul style="list-style-type: none"> ➤ Include patch 2 into geometry table (slot) and mark it for active command "Control Point". ➤ Send "Update 3D Handles" notification to "Control Point" command.
4) Select Matching command.	<ul style="list-style-type: none"> ➤ Include Matching command into the active command table. ➤ Activate Matching command.
5) Select patch 2 as modified patch with neighbor edge to patch 1.	<ul style="list-style-type: none"> ➤ Mark patch 2 in geometry table for active command Matching as modification patch. ➤ Send "Update 3D Handles" notification to Matching command.
6) Select patch 1 as reference patch with neighbor edge to patch 2.	<ul style="list-style-type: none"> ➤ Mark patch 1 in geometry table for active command Matching as reference patch. ➤ Send "Update 3D Handles" notification to Matching command.
7) Select Extrapolation command.	<ul style="list-style-type: none"> ➤ Include Extrapolation command into the active command table. ➤ Activate Extrapolation command.
8) Select patch1.	<ul style="list-style-type: none"> ➤ Mark patch 1 in geometry table for active command Extrapolation. ➤ Send "Update 3D Handles" notification to Extrapolation command.
9) Extrapolate patch 1 (dynamic interactive) by moving the extrapolation handle to the left, until the result satisfies.	<p>For each dynamic step on modification of patch 1 do:</p> <ul style="list-style-type: none"> ➤ Check all commands marked on patch 1: <ul style="list-style-type: none"> • Found Matching. <ul style="list-style-type: none"> ▪ Send "Update 3D Handles" notification to Matching. • Found "Control Point Modification". <ul style="list-style-type: none"> ▪ Send "Update 3D Handles" notification to "Control Point Modification". • Found Extrapolation. <ul style="list-style-type: none"> ▪ Send "Update 3D Handles" notification to Extrapolation. ➤ Finish dynamic step.
10) Activate Matching by clicking on the matching handle	<ul style="list-style-type: none"> ➤ Check all commands marked on patch 2: <ul style="list-style-type: none"> • Found Matching. <ul style="list-style-type: none"> ▪ Send "Update 3D Handles" notification to Matching. • Found Control Point Modification. <ul style="list-style-type: none"> ▪ Send "Update 3D Handles" notification to "Control Point".
11) Move third control point row of patch 2 (dynamic interactive) using one of the line segments of the control point mesh handle, until the following matching will satisfy (this is a guess).	<p>For each dynamic step on modification of patch 2 do:</p> <ul style="list-style-type: none"> ➤ Check all commands marked on patch 2: <ul style="list-style-type: none"> • Found Matching. <ul style="list-style-type: none"> ▪ Send "Update 3D Handles" notification to Matching. • Found Control Point Modification. <ul style="list-style-type: none"> ▪ Send "Update 3D Handles" notification to "Control Point". ➤ Finish dynamic step (patch 2 already handled).
12) Activate Matching again by clicking on the matching handle	<ul style="list-style-type: none"> ➤ Check all commands marked on patch 2: <ul style="list-style-type: none"> • Found Matching. <ul style="list-style-type: none"> ▪ Send "Update 3D Handles" notification to Matching. • Found Control Point Modification. <ul style="list-style-type: none"> ▪ Send "Update 3D Handles" notification to "Control Point".
Repeat step 11 and 12 until result satisfies.	

Fig. 3

Class A system with parallel and associative commands

User	Main Command, Slot
1) Select "Control Point" command.	<ul style="list-style-type: none"> ➤ Include "Control Point" command into the active command table. ➤ Activate "Control Point" command.
2) Select patch 1.	<ul style="list-style-type: none"> ➤ Include patch 1 into geometry table (slot) and mark it for active command "Control Point". ➤ Send "Update 3D Handles" notification to "Control Point" command.
3) Select patch 2.	<ul style="list-style-type: none"> ➤ Include patch 2 into geometry table (slot) and mark it for active command "Control Point". ➤ Send "Update 3D Handles" notification to "Control Point" command.
4) Select Matching command.	<ul style="list-style-type: none"> ➤ Include Matching command into the active command table and mark it as associative command. ➤ Activate Matching command.
5) Select patch 2 as modified patch with neighbor edge to patch 1.	<ul style="list-style-type: none"> ➤ Mark patch 2 in geometry table for active command Matching as modification patch. ➤ Send "Update 3D Handles" notification to Matching command.
6) Select patch 1 as reference patch with neighbor edge to patch 2.	<ul style="list-style-type: none"> ➤ Mark patch 1 in geometry table for active command Matching as reference patch. ➤ Send "Update 3D Handles" notification to Matching command.
7) Select Extrapolation command.	<ul style="list-style-type: none"> ➤ Include Extrapolation command into the active command table. ➤ Activate Extrapolation command.
8) Select patch1.	<ul style="list-style-type: none"> ➤ Mark patch 1 in geometry table for active command Extrapolation. ➤ Send "Update 3D Handles" notification to Extrapolation command.
9) Extrapolate patch 1 (dynamic interactive) by moving the extrapolation handle to the left, until the result satisfies.	<p>For each dynamic step on modification of patch 1 do:</p> <ul style="list-style-type: none"> ➤ Check all commands marked on patch 1: <ul style="list-style-type: none"> • Found Matching (associative). <ul style="list-style-type: none"> ▪ Activate Matching Action. ▪ Mark Patch 2 as modified (by Matching). ▪ Send "Update 3D Handles" notification to Matching. • Found "Control Point Modification". <ul style="list-style-type: none"> ▪ Send "Update 3D Handles" notification to "Control Point Modification". • Found Extrapolation. <ul style="list-style-type: none"> ▪ Send "Update 3D Handles" notification to Extrapolation. ➤ Look for patches modified by associative commands: ➤ Found patch 2. ➤ Check all commands marked on patch 2: <ul style="list-style-type: none"> • Found Matching (associative). <ul style="list-style-type: none"> ▪ No Action, because matching itself modified patch 2. ▪ Send "Update 3D Handles" notification to Matching. • Found Control Point Modification. <ul style="list-style-type: none"> ▪ Send "Update 3D Handles" notification to "Control Point Modification". ➤ Finish dynamic step.
10) Move third control point row of patch 2 (dynamic interactive) using one of the line segments of the control point mesh handle, until the result satisfies.	<p>For each dynamic step on modification of patch 2 do:</p> <ul style="list-style-type: none"> ➤ Check all commands marked on patch 2: <ul style="list-style-type: none"> • Found Matching (associative). <ul style="list-style-type: none"> ▪ Activate Matching Action. ▪ Send "Update 3D Handles" notification to Matching. • Found Control Point Modification. <ul style="list-style-type: none"> ▪ Send "Update 3D Handles" notification to "Control Point". ➤ Look for patches modified by associative commands: ➤ Found patch 2. ➤ Finish dynamic step (patch 2 already handled).

Fig. 4

Class A system with parallel commands, associative commands and scene storage

User	Main Command, Slot
1) Select stored scene.	<ul style="list-style-type: none"> ➤ Reactivate all scene commands (Control Point, Matching, Extrapolation) with associated geometry selections and tool representations from the stored scene.
2) Extrapolate patch 1 (dynamic interactive) by moving the extrapolation handle to the left, until the result satisfies.	<p>For each dynamic step on modification of patch 1 do:</p> <ul style="list-style-type: none"> ➤ Check all commands marked on patch 1: <ul style="list-style-type: none"> • Found Matching (associative). <ul style="list-style-type: none"> ▪ Activate Matching Action. ▪ Mark Patch 2 as modified (by Matching). ▪ Send "Update 3D Handles" notification to Matching. • Found "Control Point Modification". <ul style="list-style-type: none"> ▪ Send "Update 3D Handles" notification to "Control Point Modification". • Found Extrapolation. <ul style="list-style-type: none"> ▪ Send "Update 3D Handles" notification to Extrapolation. ➤ Look for patches modified by associative commands: ➤ Found patch 2. ➤ Check all commands marked on patch 2: <ul style="list-style-type: none"> • Found Matching (associative). <ul style="list-style-type: none"> ▪ No Action, because matching itself modified patch 2. ▪ Send "Update 3D Handles" notification to Matching. • Found Control Point Modification. <ul style="list-style-type: none"> ▪ Send "Update 3D Handles" notification to "Control Point Modification". ➤ Finish dynamic step.
3) Move third control point row of patch 2 (dynamic interactive) using one of the line segments of the control point mesh handle, until the result satisfies.	<p>For each dynamic step on modification of patch 2 do:</p> <ul style="list-style-type: none"> ➤ Check all commands marked on patch 2: <ul style="list-style-type: none"> • Found Matching (associative). <ul style="list-style-type: none"> ▪ Activate Matching Action. ▪ Send "Update 3D Handles" notification to Matching. • Found Control Point Modification. <ul style="list-style-type: none"> ▪ Send "Update 3D Handles" notification to "Control Point". ➤ Look for patches modified by associative commands: ➤ Found patch 2. ➤ Finish dynamic step (patch 2 already handled).
